

Excellent flexibility

- **Broad flexibility** in fuels, operating conditions, maintenance concepts, package solutions and ratings
- Designed for **flexible operation** makes it perfectly suited for **peaking power** and **grid support**
- **Single or multiple units**, up to CC 6×1 configuration

Proven reliability

- **Market leading** gas turbine, >50% market share in 42–80 MW range for the last 5 years
- World-class reported fleet **reliability of >99%**
- **Proven long-term record** with hundreds of successful installations around the world

High efficiency

- **High efficiency** and **steam-raising capability** make it excellent in both **simple cycle** and **cogeneration**
- **Highest combined cycle efficiency** ensures low lifecycle cost and small environmental footprint

Sustainable & future proof

- **Robust dry low emission DLE system** with **world-class emission performance** over a wide load range
- **Excellent fuel flexibility** with wide gas fuel composition
- **Targeting 100% hydrogen** capability by 2025–2030
- Biodiesel (HVO100) released
- Continuously improving other **green fuel** capabilities

Capable to burn

75%*
hydrogen

* H₂ content in natural gas (volume percent)

Industrial gas turbine SGT-800
